

VIDEO AUTOMATION STUDIO

Almost Impossible. You Will Never Need a Video Editor Again.

One click — quotes, transitions, voiceovers, captions, effects, AI lip-sync, cleaning.
Two years of relentless iteration. From raw footage to platform-ready content in minutes.

CORE PIPELINE — ONE CLICK, FULL VIDEO

- **Auto Quote Engine** transcript or Excel → timed text overlays with per-niche prompts (movies, courtroom, heartwarming, voiceover)
- **23+ Transitions** Fade, Zoom, Blur, Slide, Wipe, Glitch, Bounce, Mask Reveal, Radial Wipe, Split Wipe, Luma Wipe, Cinematic Bars, Color Dissolve — each with 15+ SFX sounds
 - auto call-to-action with spoken/shown label stripping, multi-line wrapping, freeze-frame tail extension
 - per-niche script modes (Rewrite / Write Story) with dual prompt-store architecture
 - Instagram Reels, TikTok, YouTube Shorts, YouTube, Facebook — custom resolution & crop modes

ARTIFICIAL INTELLIGENCE

- Microsoft Edge Cloud (41+ voices, 17 locales), Kokoro ONNX (42 voices), Qwen3-TTS (emotion + voice cloning), NeuTTS
- watches courtroom/movie video → structured Summary + Montage Clips + Commentary Spots → auto-builds the montage
- word-level timing for TTS, dialogue captions from original audio, overlap suppression with voiceover
- lip-sync any face image to speech, overlay or standalone mode, position & size controls
- optional Gemini / OpenAI / Anthropic reranking over heuristic scene-cut scoring

CAPTIONS — THREE INDEPENDENT STACKS

- style presets, font/color/size, background, stroke, position, sync offset, emoji presets
- word-by-word colour-highlight animation, independent font & animation type
- auto-transcribe original audio, third caption layer, smart word-level overlap suppression
- phone-aspect canvas with toggle layers, scrubber, crosshair alignment guide

AUDIO ENGINEERING

- file or folder, volume, auto-loop, intelligent ducking that drops during speech
- per-frame amplitude check — original audio drops to 15% during TTS segments
- Deep / High / Robot / Echo / Whisper / Radio / Chipmunk + SSML speaking styles
- consistent loudness with configurable dB target
- threshold, min-duration, transition smoothing

VISUAL EFFECTS

- Glitter, Stars, Hearts, Confetti — all with animated motion paths
- Light Leaks, Lens Flare, Film Burn — configurable intensity & repeat interval
- region blur, custom rectangular blur regions, feather edge per-pixel control
- 14+ AM-style presets: hue, saturation, gamma, shadows, VHS, scanlines, RGB split, bloom, colorama, grain, vignette, film burn & more
- progress bar, watermark, vignette, dim, grain, drop shadow, glitch, chromatic aberration, text glow, neon glow, gradient, border, crosshair, spotlight, dual-video

PERFORMANCE — GPU RENDERER

- auto-detects NVENC (RTX 2060+) vs CPU. 30 fps 1080p at 50–100 fps vs 1–2 fps MoviePy fallback.
- AV1 seek optimisation, static overlay pre-merge, density-adaptive blend, vectorised feather cache. 3-min render: ~60 min → ~7 min.

POST-PROCESSING & CLEANUP

- instant platform-metadata strip, no re-encode

- deep re-encode with mirror, smart zoom, unique colour profile, pitch-shifted audio, borders
- speed/rotation, letterbox, colour wash, watermark, RGB glitch, Ken Burns zoom, reverb, transitions re-apply
- upload processed videos directly from the app

SPECIALISED MODULES

- channel-aware single-video pipeline, per-channel presets, batch + skip-done
- Selenium + CDP API interception for hidden note IDs, cookies.txt auth, cursor pagination
- unified cookies.txt for instaloader + yt-dlp, auto re-login on session expiry
- full Wav2Lip pipeline: face image, TTS audio, lip-sync, composite back onto video

QUALITY OF LIFE

- scrollable canvases, 10 notebook tabs, color pickers everywhere, live preview
- save/load/delete full effect combinations as named templates
- one-click resolution presets with live aspect-ratio display
- overlay_settings.json + processing_paths.json auto-save/load
- standalone deployment ready on any machine

*Four TTS engines, five AI integrations, 23 transitions, three caption stacks, a GPU render pipeline, and a cleaning engine that strips every fingerprint.
All behind one button.*

One Click. Ready to Post.
